How to Open DopeNotch AI (First Launch)

DopeNotch runs 100% locally on your Mac. While our Apple notarization is finishing up, follow these quick steps once to open it.

1 Drag DopeNotch to Applications

Drag **DopeNotch.app** into your **Applications** folder, then open it from Applications.

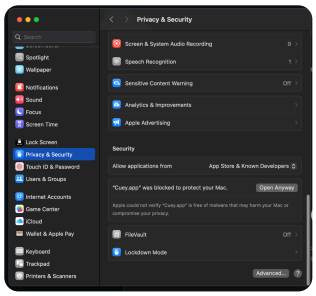

2 Right-Click → Open (or Approve in Privacy & Security)

Fastest way: In Applications, **Right-Click** DopeNotch → click **Open**.
On macOS Sequoia: If macOS shows a *"Not Opened"* popup, do these 4 clicks:

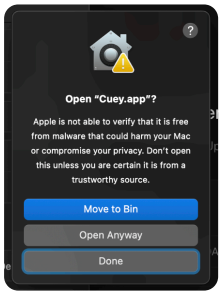

A. Click "Done" on the popup

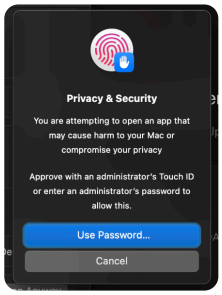

B. System Settings → Privacy & Security → "Open Anyway"

C. Click "Open Anyway" to confirm

D. Approve with Touch ID or Mac Password

Done! DopeNotch AI will now open normally every time.
